Intercooler for the Renault Clio RS200 1.6 Turbo

FMINTRCT

Product Description:

The latest generation 1.6 turbocharged Renault Clio features a side mounted intercooler from the factory that is both in the wrong location and too small for the standard car, let alone cars that have been ECU tuned. The Renault solution for the Clio Cup cars was to retrofit the entire grid with water spray cooling for the core, but still this was inadequate on the track after a few laps. Given a 15 deg C day, the typical temperature for the Renault core is over and above 50 deg C, where our core maintained temperatures between 15 and 20 deg C cooler.

Due to the location of the standard core and the routing of the air conditioning pipes, going any larger is impossible in the stock location without making major changes. Our solution was a front mounted intercooler that utilises the lower open grille in the bumper, ensuring a good supply of cooling air through the core. The kit we supply come complete with all the pipework, hoses, clamps, nut and bolt required for installation.

Price : 879,00 EUR [incl. 19% VAT plus shipping costs]
